EMERGENCY CALLS: 800-331-3148

This label for Furadan 4F is valid until December 31, 2008 or until otherwise amended, withdrawn, canceled or suspended.

CROP	RATE OF APPLICATION	PEST
Sugar Beets	2 quarts per acre	Sugar Beet Root Maggot

DIRECTIONS FOR USE

Make application in a 4 to 5 inch band over the plant row in a minimum of 10 gallons of finished spray per acre or as a stream directed over the crown of the plants. Time treatments so that applications begin after adult fly emergence. Moisture after treatment is necessary to incorporate the Furadan 4F. Under sprinkler irrigation, follow treatment with a light irrigation. Rainfall will be needed in furrow irrigation fields to achieve consistent results.

When applied as a band over the plant row, fungicides, herbicides, or liquid fertilizers may be tankmixed with the Furadan spray mixture.

In heavy sugar beet root maggot areas consult your Cooperative Extension or Sugar Company Fieldman for strategies to control sugar beet root maggot adults and larvae.

RESTRICTIONS

Do not apply within 90 days of harvest.

Do not use more than two quarts per acre per season.

Furadan spray solution must have a pH of 7 or lower. The use of a buffering agent may be necessary.

Check physical compatibility of any tank mix before making up large quantities.

Do not tank-mix with humic acid.

Do not use at planting.

Do not use this product through any type of irrigation system.

**ALL APPLICABLE DIRECTIONS, RESTRICTIONS, AND PRECAUTIONS ON THE EPA REGISTERED
FURADAN 4F INSECTICIDE-NEMATICIDE LABEL (EPA Reg. No. 279-2876) MUST BE FOLLOWED.**

THIS LABEL MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF PESTICIDE APPLICATION.
